GreenLine Systems Adds Targeting and Risk Analysis Expert to Management Team

Christopher Thibedeau, Former Manager of The Canada-United States Harmonized Risk Scoring and Advance Trade Data Initiative for Canada Border Services Agency joins GreenLine as Vice President of Risk Assessment Solutions

Arlington, VA / March 21, 2006 --- GreenLine Systems, Inc. is pleased to announce that Mr. Christopher Thibedeau has joined the executive team as Vice President of Risk Assessment Solutions. Prior to joining GreenLine, Mr. Thibedeau held the position of Manager, *Canada-United States Harmonized Risk Scoring and Advance Trade Data Initiative* for the Canada Border Services Agency (CBSA) where he led efforts towards the harmonization of Customs commercial processing and risk assessment solutions in the North American region. With previous management roles in CBSA's Contraband and Intelligence Services Directorate, Information Science and Technology Branch, as well as Enforcement and Investigation Services for the Canadian Food Inspection Agency, Mr. Thibedeau brings over 17 years of experience and insight into border risk management, risk assessment frameworks, customs operations, and the design and development of automated targeting systems

"Over the past few years I've paid great attention to companies developing automated solutions for intelligence, targeting, and risk assessment purposes to accommodate the exponentially growing volume of travellers and trade," said Mr. Thibedeau. "GreenLine is a company that has always impressed me with their leading edge risk assessment and technology approaches. I believe they are spearheading the most effective and innovative Supply Chain Risk Management solutions being developed in the world today."

As a key member of CBSA's Major Project Design & Development Directorate, Mr. Thibedeau conceived of and led the *Canada-United States Harmonized Risk Scoring and Advance Trade Data Initiative*, a bi-national initiative formally adopted under the auspices of the Canada-United States Smart Border Agreement and the North American Security and Prosperity Plan. Under this initiative, both countries have agreed to establish a Canada/US partnership to work together to provide risk assessment systems and mission critical data needed to augment supply chain security and continental security against terrorist related threats.

In 2005, Mr. Thibedeau was awarded a GTEC (Government of Canada Technology Awards) gold medal for his work leading the design and development teams responsible for TITAN. TITAN is an automated targeting system that provides CBSA with the ability to risk manage all containers and commercial cargo destined to Canada by directing resources to shipments that pose high or unknown risk, while facilitating pre-approved legitimate and/or low risk shipments

Mr. Thibedeau has also represented CBSA in the development of the Global Information and Intelligence Strategy (GIIS) with the World Customs Organization (WCO). He authored a WCO endorsed paper titled "Global Container Security and Identification of High Risk Indicators" that served as a core input to the General High Risk Indicator (GHRI) document. The GHRI now forms a major component of the "WCO Framework of Standards to Secure and Facilitate Global Trade," endorsed by over 169 Customs Administrations around the globe.

In addition, Mr. Thibedeau developed and implemented the original joint in-transit container targeting initiative (JTI) as part of the Canada-United States Smart Border Agreement. This initiative was used as the prototype for the Container Security Initiative (CSI). He also conducted and led the Canada-US Marine Benchmarking Study and played a key role in introducing the 24 hour manifest rule in Canada, in negotiating the use of the US Customs Automated Targeting System (ATS) in Canada, and in designing the operational plan for ACI Marine including the design of the National Risk Assessment Center (NRAC).

"We are very pleased that Mr. Thibedeau has chosen to join the GreenLine team," said Noah Rosenkrantz, CEO of GreenLine Systems. "Mr. Thibedeau brings a detailed understanding of both the operational and technology challenges facing Customs and Border Security administrations on how to effectively facilitate and secure global trade. We are certain that our clients will derive significant benefits from his expertise."

About GreenLine Systems

GreenLine Systems, Inc. (<http://www.greenlinesystems.com>) delivers software and services providing supply chain stakeholders the ability to identify, evaluate and respond to the operational and financial risks associated with the movement of goods across borders. An innovative combination of supply chain visibility, field observation management, information analysis and command and control capabilities offers GreenLine's customers and their trading partners an unprecedented ability to rapidly create "Trusted Trading Partner Networks"(TM)
